

Your Guide to
Flexible Energy
Contracts

When switching your businesses energy one of the first things you will be asked is what kind of energy contract you are looking for. There are three main types of energy contracts, flexible energy contracts, pass through contracts and fixed energy contracts. All three offer a range of benefits and risks, all businesses are different, so it is important for you to know the difference and to establish which contract is best for your business.

This guide focuses on flexible energy contracts, for more information about pass through or flexible contracts please see our pass through or flexible energy guide. Fixed price contracts can be seemed as too restrictive for some business customers, a flexible procurement contract allows you to take advantage of an ever-changing energy market by spreading the risks associated with energy purchasing. A flexible energy contract gives businesses clearer prices and more control over their energy buying.

Benefits and Risks to flexible energy contracts

If you would like to take advantage of a volatile market and capitalize on market upward and downward trends whilst maximizing flexibility and reducing costs then flexible contracts can bring your business significant benefits. However, it is important to note that it does require a thorough understanding of the energy market and can be more complex than fixed contract requiring input from yourselves.

- Take advantage of fluctuating energy market prices Spread the risk over multiple purchase points
- Gives complete control over your energy purchasing
- Benefit from the help and ongoing support of our experienced industry professionals

- It is an involved process and requires you to make complex purchasing decisions, as a result you will need detailed knowledge of the energy market
- Requires larger tradable volumes in order to access the wholesale market
- Can expose the customer to some risk, if not properly managed by an energy consultancy such as Love Energy Solutions.

Flexible energy contracts allow you to take advantage of a fluctuating wholesale energy prices, allowing you to purchase energy at the most advantageous time.
